

EN USE AND MAINTENANCE MANUAL

Thank you for purchasing WALLY, the MTP new expandable hose 100% made in Italy MTP waiting to be discovered!

Contents of the package:

- 1 WALLY MTP extendible hose that extends approximately twice its original length as water flow through it at a pressure of 3 BAR. Beyond doubling, it can stretch again... just pull it with very light effort until it reaches two and a half times its original length;
- 1 3/4" tap connector;
- 2 snap-fit fittings with anti-crease accessory;
- 1 multi-function irrigation gun.

Information and technical data:

- internal Ø approximately 8 mm;
- working pressure: from 0 to 10 BAR;
- bursting pressure: 30 BAR;
- working temperature: -10°C + 50°C.

Recommendations and advice:

- WALLY MTP extends by itself approximately twice its original length as water from the domestic water supply (3 BAR) through it at an ambient temperature of around 20°C;
- in the case of colder temperatures, some stresses may be necessary to favor elongation;
- if your water system does not reach a pressure of 3 BAR, it is likely that WALLY MTP will not extend as expected;
- in this case WALLY MTP will still be easy to use. In fact, it will be enough to pull it slightly to favor its elongation;
- WALLY MTP, beyond doubling, can stretch again until it reaches two and a half times its original length. Also in this case it will be enough to pull it with very light effort;
- in the total absence of water pressure, WALLY MTP will still be usable without losing its qualities. Just pull it with a slight power and it will follow you until it reaches two and a half times its original length;
- it is advisable to leave the hose under pressure for a few minutes before first use;
- the dimensions when it stretches or shrinks may vary after a few uses based on the water pressure, temperature and frequency of use;
- it is advisable to completely empty the hose at the end of use;
- it is recommended not to use on sharp surfaces;
- not suitable for use with hose reel carts.
